BitPay (BPY) Whitepaper

Version 1.0 – April 2025

---

1. Executive Summary

BitPay (BPY) is a BEP-20 token developed on the Binance Smart Chain (BSC). Its goal is to offer a useful, robust, and transparent digital tool for developing decentralized financial solutions, digital commerce, payments, investment, Web3 integrations, and other utilities within the blockchain ecosystem. With a community-driven and organic growth approach, BitPay aims to position itself as a trustworthy, versatile, and long-term cryptocurrency.

---

2. Token Features

• Fast and secure transactions thanks to the BSC infrastructure.
• **Token Burn**: Ability to burn tokens to reduce total supply.
• **Controlled Minting**: The owner can mint new tokens if required for ecosystem development.
• **Pausable Function**: In case of anomalies or risks, the contract can be paused.
• **Token Recovery**: Mechanism to recover tokens sent to the contract by mistake.

---

3. Project Objectives

• Build an active community around BitPay.
• Develop an educational and commercial platform based on the token.
• Get listed on centralized exchanges and tracking platforms.
• Ensure progressive and transparent liquidity.
• Promote BPY usage in real-life applications such as payments, shops, etc.

---

4. Characteristics

• **Token Name**: BitPay
• **Symbol**: BPY
• **Network**: Binance Smart Chain (BEP-20)
• **Total Supply**: 1,000,000,000 BPY
• **Decimals**: 18

---

5. Distribution and Reserve

• **Initial circulating supply**: 900,000,000 BPY
• **Reserved tokens by the team (not yet released)**: 100,000,000 BPY
• This reserve is intended for future developments, incentives, and project sustainability.
• This reserve is disclosed for transparency purposes.

---

6. Roadmap

Phase 1: Initial Launch
• Smart contract creation on BSC
• Contract verification on BscScan
• Official website publication
• Logo and visual branding design

Phase 2: Community Building
• Launch of social media channels
• Listing on platforms like CoinGecko and CoinMarketCap
• Creation of buying tutorials

Phase 3: Advanced Features
• Integration with payment platforms
• Partnerships with crypto projects
• Staking and rewards for holders

Phase 4: BitPay Ecosystem
• Development of native dApps
• Official wallet
• DAO for decentralized governance

---

7. Security

BitPay is built using OpenZeppelin's standard contracts, known for their reliability and security. The contract is verified on BscScan, and all its functions are fully transparent.

---

8. Conclusion

BitPay (BPY) is a token born from and for the community. Its purpose is clear: to facilitate crypto payments and adoption through modern, accessible, and transparent tools. With a realistic roadmap and a committed team, BPY aims to become a solid and lasting solution.

---

9. Project Team

BitPay was created by Marcelo Tonini from Mendoza, Argentina, an independent developer and entrepreneur passionate about the crypto ecosystem, with experience in technology and digital innovation. The project was built through personal effort, without external investors, ensuring a 100% transparent and committed foundation.
